Professional Profile

IT support professional with 2+ years of first-line troubleshooting: NOC incident response at ICT Authority, field-system support at Kenya Power, and support for 30+ individual and small-business clients. Comfortable with monitoring, incident handling and clear documentation. Google IT Support Professional and KCNA certified, now on the AWS re/Start program and preparing for the AWS Certified Cloud Practitioner exam.

Career Summary / Experience

Freelance Technical Support **February 2025 - October 2026**

Nairobi, Kenya

- Served as first point of contact for 30+ individual and small-business clients, finding the root cause of Windows, software, networking, connectivity and peripheral issues and walking each client through the fix in plain language.
- Configured client PCs, applications and networks, and advised on hardware, software and security upgrades.

Infrastructure Operations Analyst **October 2023 - February 2025**

Kenya Power and Lighting Company (KPLC), Kenya

- Acted as the team's primary technical troubleshooter, resolving field-system synchronization issues, data inconsistencies and mobile platform failures so field crews could keep working.
- Handled usage-data requests from customers affected by outages and managed frustrated clients while troubleshooting delays were resolved.
- Designed a unified work allocation procedure to stop uneven task sharing from causing backlogs and long hours.
- Accelerated billing corrections and service restoration by coordinating finance, operations, maintenance and customer service teams across distributed regions.
- Audited and validated thousands of electricity assets across 12 counties (roughly 60 to 70 a day), flagging bypassed meters, faulty equipment and undocumented connections that were leaking revenue.

Network Operations & Technical Support Intern **May 2022 - September 2022**

ICT Authority, Nairobi, Kenya

- Diagnosed and fixed a critical, undocumented CIDR configuration conflict that was silently disrupting connectivity for government ministries, restoring full network performance.
- Kept government ministries connected by monitoring the Government Common Core Network (GCCN) from the NOC, running real-time incident response, endpoint diagnostics and root cause analysis.
- Cut recurring NOC issue-resolution time by roughly 60% by writing troubleshooting documentation and support guides adopted across the technical support team.
- Kept endpoints and access infrastructure running through switch installation, LAN configuration, access-point deployment, VoIP troubleshooting and OS and security updates.
- Helped deliver Kenya's early Public WiFi initiative at strategic Nairobi locations, working with senior Cisco and Huawei administrators on IP addressing, subnet allocation and network redundancy planning.

Projects & Portfolio

- **3-tier web app in af-south-1:** custom VPC, public and private subnets across 3 AZs, ALB, 2 EC2 instances, MySQL on RDS (private subnet), CloudWatch. Used netcat to confirm connectivity before testing database authentication.
- **Portfolio site on S3 + CloudFront** (AWS CLI, Git). Code and diagrams: github.com/Mukui012 | Live site

Professional Development and Certification

- Google IT Support Professional Certificate, Coursera, July 2025 | Credly badge
- Kubernetes and Cloud Native Associate (KCNA), Linux Foundation, May 2026 | Credly badge
- In progress: AWS Certified Cloud Practitioner (exam preparation)
- In progress: AWS re/Start, Ajira Digital (12-week full-time cloud skills program), August 2026 – November 2026

Education and Qualifications

BSc Computer Science - University of Eldoret

Skills and Competency

- **Support:** Troubleshooting, root cause analysis, incident response, NOC monitoring, customer communication
- **Systems and networking:** Windows, Linux (command line), TCP/IP, DNS, DHCP, CIDR and subnetting, LAN, Wi-Fi, VoIP
- **Cloud:** AWS (VPC, EC2, ALB, RDS, S3, CloudFront, CloudWatch, IAM), AWS CLI, Docker, Kubernetes
- **Tools:** Git, Bash, SQL basics
